JANUARY 26 LPAC WEEKLY REPORT

“THE ECONOMICS OF EXTINCTION AND THE PRINCIPLE OF PROGRESS”

LAROUCHEPAC.COM/WEEKLY/JAN26

On Thursday January 26th Lyndon LaRouche, and **The Basement** Research Team Members Sky Shields and Ben Deniston conducted a special edition of the LaRouchePAC Weekly Report that should be rightly considered an important turning point in world politics. The survival of the human race rests on a fundamental change in thought, away from the popular economics of monetary babble, towards the domain of scientific self-development of the universe as a whole. This report is now featured prominently on the front page at larouchebac.com.

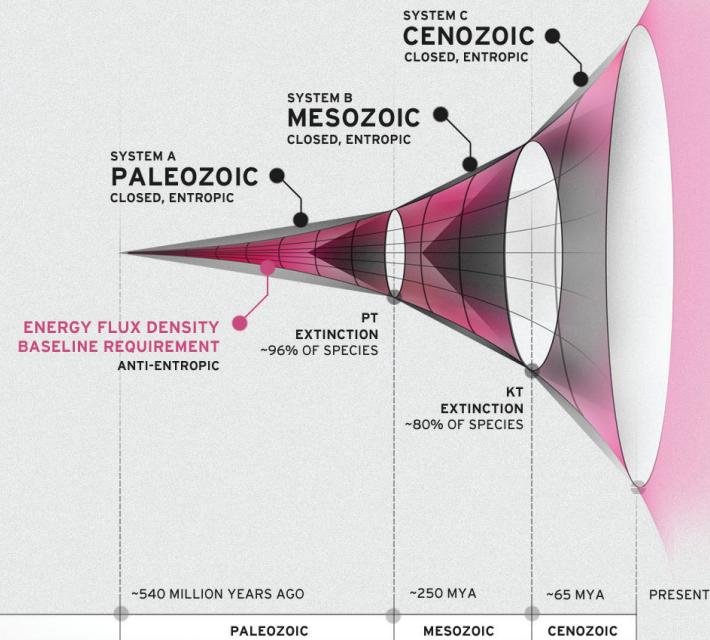

Here is an excerpt from this crucial report:

“Now, the question is: What is the texture of anti-entropic development and anti-entropic timing which governs [economic processes]? And we’ll see that it’s a

reflection of one very key economic principle, which is the increase in **energy flux density**. We can take that continuous process, as something we want to carry over now, to policy making in the present to get us out of the current crisis. This discussion is the one that we need to bring, right now, to the economics departments, and to make dominant in the planet, because we’re witnessing the failure – currently, globally – you’re witnessing the failure of everything that’s been proposed as economics, over the last several decades. And anybody right now, I think you’ve got people who are realizing that they’ve been sold a bill of goods with what’s been promised to them as economic education and scientific education. And we’re in a position right now, where we really do need a Renaissance, we need a revival of this earlier approach and a reapplication of it, if we’re even going to survive.”

Here is a heuristic device which you will see in the Weekly Report, provided to aid you in coming to understand the true nature of large scale economic, biological, and scientific processes, processes which are contrary to all of what is taught in universities today. The fact that this contrast is true is the foundation of why we face this current dire economic crisis and threat of thermonuclear war today.
